STRUCTURAL TIMBER

Unique ID: MAS-F100105

Object type certainty: Possibly
Workflow status: Published

These two unidentified timbers measure 790 x 75 x 90 mm and 160 x 100 x 60 mm and were recovered from a boat's trawl nets whilst working out of Newhaven, East Sussex. The small piece shows evidence of a longer period of immersion in terms of abrasion and marine borer damage, though this may also be due to the relative hardness and variety of the two woods, or any treatment that might have been received to protect the timber. Neither timber appears to be of ship related origin, with the larger darker piece looking as if it might have been a post and rail fence board originally, rather than a ship's board or rail. The smaller piece appears to be a fragment of an offcut or discarded section of a larger timber piece.

Class: ARCHITECTURE **Sub class:** ARCHITECTURAL FRAGMENT

Subsequent actions

Current location of find: With finder
Subsequent action after recording: Submitted as wreck to the Receiver of Wreck

Wreck details

Droit number: 223/17

Chronology

Broad period: NINETEENTH CENTURY
Period from: NINETEENTH CENTURY
Period to: MODERN

Dimensions and weight

Quantity: 2

Discovery dates

Date(s) of discovery: Wednesday 23rd August 2017
