KNIFE

Unique ID: MAS-O100169

Object type certainty: Certain
Workflow status: Published

Double edged blade covered with concretions, around 25 mm wide and 280 mm long. Displays iron oxidation, and the item has not been preserved well. The blade is roughly 200 mm long and the thicker handle is approximately 80 mm long.

Following consultation with Henry Yallop of The Royal Armouries museum, this object can only be discribed as roughly the shape of a common blade form , i.e. roughly lenticular, and about 25 mm broad. What is not clear is whether it was once the complete blade, or that this is part of one, or alternatively that it was the part of another forged object, and only appears to be blade like.
